001'. It will automatically download the newest CMakeLists.txt file. 4. CMakeLists.txt It contains some information of "special" paths such as "../obj", "../obj", "/bin/" etc. CMakeLists.txt also includes a number of "convenience" macros so that you can write only simple things. CMakeLists.txt can be used for build automation (recipe), configuration of CMake-based projects (find_package()), configuration of development environment (find_package()), etc. CMakeLists.txt is also useful when using CMake and Qt. The CMake source code is included in CMakeLists.txt. The file size is about 250k. If you want to run `pkg-config --cflags qt5-5.6` on a target, you should place `PKG_CONFIG_CFLAGS = -I.. -I../obj` at the first line of CMakeLists.txt. `PKG_CONFIG_LIBS` should be done in a similar way. Some instructions about the configuration of CMake-based projects are explained in "configuring Qt-based projects using CMake". 5. CMake files The following is an example of a "default" CMake file. include(Compiler/CMakeLists.txt) #Default build rules. set(CMAKE_CXX_STANDARD 11)

```
set(CMAKE_CXX_STANDARD_REQUIRED ON) set(CMAKE_CXX_EXTENSIONS OFF) #Build rules for Windows.  
if(WIN32) set(CMAKE_WINDOWS_EXPORT_ALL_SYMBOLS ON) set(CMAKE_CXX_FLAGS  
"${CMAKE_CXX_FLAGS} -Wall -W") endif() #Default CMake options. set(CMAKE_82157476af
```
